

Guide to Cloud Cybersecurity Controls – Cloud Service Providers Implementation

(GCCC-CSP - 1: 2023)

TLP: white

Document Classification: Public

Disclaimer: This Guide has been developed by the National Cybersecurity Authority to assist organizations in implementing Cloud Cybersecurity Controls (CCC–1:2022) for Cloud Service Providers (CSPs). The National Cybersecurity Authority disclaims responsibility for relying solely on this document and emphasizes the importance of considering the organization's specific requirements and environment. The National Cybersecurity Authority clarifies that this guide serves as an illustrative model and does not necessarily mean that this is the only method of implementing Cloud Cybersecurity Controls, as long as alternative methods align with the National Cybersecurity Authority. This document contains some illustrative deliverables related to the implementation of Cloud Cybersecurity Controls. The assessor or auditor has the right to request other evidences as deemed necessary to ensure that proper implementation of all Cloud Cybersecurity Controls.

In the Name of Allah,
The Most Gracious,
The Most Merciful

Traffic Light Protocol (TLP):

This marking protocol is widely used around the world. It has four colors (traffic lights):

Red - Personal, Confidential and for Intended Recipient Only

The recipient has no rights to share information classified in red with any person outside the defined range of recipients, either inside or outside the organization, beyond the scope specified for receipt.

Amber – Restricted Sharing

The recipient may share information classified in amber only with intended recipients inside the organization and with recipients who are required to take action related to the shared information.

Green – Sharing within The Same Community

The recipient may share information classified in green with other recipients inside the organization or outside it, within the same sector or related to the organization. However, it is not allowed to exchange or publish this information on public channels.

Introduction

The National Cybersecurity Authority (referred to in this document as "NCA") developed this guideline for implementing the cybersecurity controls stated in the Cloud Cybersecurity Controls (CCC–1:2020) for Cloud Service Providers (CSPs), to enable national organizations to implement the requirements to comply with the Cloud Cybersecurity Controls (CCC–1:2020). This guideline was developed based on the information and experiences that NCA has collected and analyzed since the publication of the controls and was aligned with cybersecurity best practices to facilitate the implementation of the controls across national entities.

Objectives

The main objective of this guide is to enable national entities to fulfill compliance requirements for the Cloud Cybersecurity Controls (CCC-1:2020) implementation, strengthen their cybersecurity, and reduce cybersecurity risks that may arise from internal and external cybersecurity threats.

Scope of Work

This guideline's scope of work applies to the CSPs as stated in the Cloud Cybersecurity Controls (CCC-1:2020), which is:

- The cybersecurity controls shall apply to the CSPs and CSTs. These controls represent the minimum cybersecurity requirements for cloud computing.
- CSPs within the scope of CCC are any CSP which provides cloud computing services to the CSTs within the scope of work.
- CSTs within the scope of CCC are any government organization in the Kingdom of Saudi Arabia inside or outside the Kingdom (including ministries, authorities, establishments and others) and its companies and entities, as well as private sector organizations owning, operating or hosting Critical National Infrastructures (CNIs) that currently use or planning to use any cloud service.
- The NCA strongly encourages all other organizations in the Kingdom to leverage these controls to implement best practices to improve and enhance their cloud cybersecurity.

Structure of the Guideline

Figure 2 below shows the structure of the Implementation Guideline for Cloud Cybersecurity Controls.

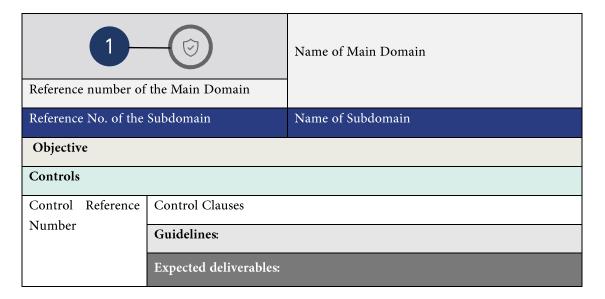

Figure 2: CCC Implementation Guideline Structure

CCC Implementation Guidance for Cloud Service Providers

General guidelines

- Identify the cloud services that are provided by the organization, and determine the degree of classification of the data that is processed or stored by the services in accordance with the cloud cybersecurity controls document (CCC-1:2020), while also considering related laws and regulations.
- Inventorying assets and cloud technology systems within the organization, reviewing them, and updating them annually.
- Inventorying user accounts with sensitive privileges, who have the ability to manage cloud services within the organization, and reviewing them periodically
- Identify and document the cloud cybersecurity requirements, along with associated roles and responsibilities, and having them authorized by the authorizing official, reviewing them periodically.
- Review the ECC guidelines and implement CCC related to CSPs.
- Develop a plan to implement CCC for CPSs, and monitoring it continuously.

CCC Implementation Guidance for Cloud Service

Providers

The below outlines implementation guideline for the CCC

(Cybersecurity Governance)

1-1	Cybersecurity Roles and Responsibilities
Objective	To ensure that roles and responsibilities are defined for all parties participating in implementing the cloud cybersecurity controls, including the roles and responsibilities of the head of the CSI and CST or his/her delegate, referred to in this controls as "Authorizing Official".
Controls	
1-1-P-1	In addition to the ECC control 1-4-1, the Authorizing Official shall also identify, documen and approve the following: 1-1-P-1-1 Cybersecurity Roles and RACI assignment for all stakeholders of the cloud
	services including Authorizing Official's roles and responsibilities.
	Related cybersecurity tools:
	Template for Cybersecurity Roles and Responsibilities
	Template for Cybersecurity Organizational Structure
	Guidelines:
	 Identify cloud services (e.g. based on the Cloud Service portfolio offered and related cybersecurity stakeholders both internal and external (e.g. Cloud Cybersecurity Architecture, Engineering Operations teams, 3rd party Cloud Security Managed Services Authorizing Office, CSTs, etc.).
	Expected deliverables:
	 Cloud Cybersecurity Roles and Responsibilities and RACI matrix documented and approved within the related Service Level Agreement (SLAs) between CSP and CSTs.
1-2	Cybersecurity Risk Management
Objective	To ensure managing cybersecurity risks in a methodological approach in order to protect the CSP's and CST's information and technology assets as per organizational policies and procedures, and related laws and regulations.
Controls	

1-2-P-1		ty risk management methodology mentioned in the ECC Subdomain 1-5, shall also the CSP, as a minimum:
	1-2-P-1-1	Defining acceptable risk levels for the cloud services and clarifying them to the CST if the risk was related to him/her.
		Related cybersecurity tools:
		Template for Risk Management Policies
		Guidelines:
		In addition to the ECC control 1-5 implementation guidelines:
		• Identify offered cloud services and analyse their business impact in a defined process (e.g. Business Impact Analysis) to understand and assess risks (for example, service disruption, data leak, unauthorized access, etc.) and the damage one cloud issue may cause.
		 Define risk levels for cloud services (e.g.: critical, high, medium, low), and the acceptable risk levels.
		• Communicate acceptable risk levels with CSTs (e.g.: sharing a Risk Assessment/Threat Analysis of cloud services provided to the CST).
		 Defined acceptable risk levels of cloud services documented and communicated with the concerned and relevant stakeholders, including the CSTs.
	1-2-P-1-2	Considering data and information classification in cybersecurity risk management methodology.
		Related cybersecurity tools:
		Template for Cybersecurity Risk Management Policies
		Template for Cybersecurity Risk Management Procedure
		• Template for Risk Register Guidelines:
		 Identify types of data and information processed/stored in the cloud services and classify it into agreed upon categories with the CST (e.g. public, restricted, secret, top secret) based on value and criticality to the CST, and include them in the cybersecurity risk management methodology when dealing with the cybersecurity risks related to cloud services.
		Expected deliverables:
		Cybersecurity Risk Management Methodology includes clear procedure to deal with data based on its classification levels.
	1-2-P-1-3	Developing cybersecurity risk register for cloud services and monitoring it periodically according to the risks.

		Related cybersecurity tools:
		Template for Cybersecurity Risk Management Policies
		Template for Cybersecurity Risk Management Procedures
		Template for Risk Register
		Guidelines:
		 Identify cybersecurity risks related to cloud services and CSTs and assess them based on the approved methodology.
		 Maintain the Cloud Services Risk Register that includes all sufficient information to analyse risk, take informed decision about how to respond to risks and track associated actions.
		Review the Risk Register periodically, based on an approved plan, considering the identified risks and their criticality.
		Expected deliverables:
		Cybersecurity Cloud Services Risk Register.
		Cybersecurity Cloud Services Risk Register review plan.
		 Cybersecurity Cloud Services Risk Register review reports.
1-3	Compliance	with Cybersecurity Standards, Laws and Regulations
Objective	To ensure that	at the CSPs' and CSTs' cybersecurity program is in compliance with related laws ns.
Controls		
		o the ECC control 1-7-1, the CSP legislative and regulatory compliance should minimum with the following requirements:
		Continuous compliance with all laws, regulations, instructions, decisions, regulatory frameworks and controls, and mandates regarding cybersecurity in KSA.
		Related cybersecurity tools:
		Template for Compliance with Laws and Regulations Policy
		Template for Reviewing and Auditing Policy
		Template for Audit Plan Log
1-3-P-1		Guidelines:
	1-3-P-1-1	 Identify Periodically (e.g. annually or when a change occurs) all laws, regulations, instructions, decisions, regulatory frameworks and controls, and mandates regarding cybersecurity that are being applied within the KSA.
		Monitor CSP's compliance with these requirements in a continuous manner (e.g. utilizing tools for daily or weekly verification).
		Expected deliverables:

1-4	· ·	 List of all laws, regulations, instructions, decisions, regulatory frameworks and controls, and mandates regarding cybersecurity that are being applied within the KSA that are applicable to the CSP. Reports clarifying the status of compliance with these requirements. Reports clarifying periodic plans for monitoring compliance. y in Human Resources 		
Objective	contractors)	To ensure that cybersecurity risks and requirements related to personnel (employees and contractors) are managed efficiently prior to employment, during employment and after termination/separation as per organizational policies and procedures, and related laws and regulations.		
Controls				
		o sub controls in the ECC controls 1-9-3 and 1-9-4, the following requirements vered prior and during the professional relationship of personnel with the CSP as		
		Positions of cybersecurity functions in CSP's data centers within the KSA must be filled with qualified and suitable Saudi nationals.		
1-4-P-1	1-4-P-1-1	 Related cybersecurity tools: Template for Cybersecurity for Human Resources Guidelines: Identify cybersecurity roles, positions and functions related to the data centres based in the KSA (e.g.: Cloud Security Engineer, Cybersecurity Monitoring Team, etc.). Employ for these positions Saudi nationals with professional cybersecurity experience and certification relevant to the position and seniority. Consider cybersecurity industry recognized professional certifications (e.g.: CISSP, CISA, CCSK, CCSP). Include data center cybersecurity staff in the cybersecurity training program to improve their skills and qualifications. Expected deliverables: List of cybersecurity positions related to the data centers within the KSA and the requirements for each position. List of employees filling these positions and their qualifications. Cybersecurity training program and the provided training certificates 		
	1-4-P-1-2	Screening or vetting candidates of personnel working inside KSA who have access to Cloud Technology Stack, periodically.		

		Related cybersecurity tools:
		·
		• Template for Cybersecurity for Human Resources Guidelines:
		Review KSA-based job titles and descriptions for duties relevant to
		access to Cloud Technology Stack and make sure candidates for these
		jobs are under screening/vetting (e.g.: Cloud Engineer, Cloud Service
		Administrator, Key Vault Security Engineer, etc.) before employment and periodically.
		Expected deliverables:
		 Screening/Vetting process defined and implemented for candidates with access to Cloud Technology Stack including a plan for a periodic screening/vetting.
		Reports of screening/vetting for these candidates. Information privacy
		and sensitivity must be in consideration when dealing with these
		reports.
		Cybersecurity policies as a prerequisite to access to Cloud Technology Stack, signed and appropriately approved.
		Related cybersecurity tools:
		Template for Cybersecurity for Human Resources
		Template for Cybersecurity Compliance
		Guidelines:
	1-4-P-1-3	Make joiners/workers familiar with organization's cybersecurity policies
		before they are granted the access to Cloud Technology Stack by signing
		a formal form,
		Expected deliverables:
		 Cybersecurity policies acknowledgement and compliance form is signed
		by all personnel working on Cloud Technology Stack before having
		access.
1-4-P-2	In addition to	o sub controls in the ECC control 1-9-5, the following requirements should be in
	place, as a n	ninimum, for the termination/completion of a human resource's professional
	relationship v	vith the CSP:
	1-4-P-2-1	Assurance that assets owned by the organization (especially those with security
		exposure) are accounted for and returned upon termination.
		Related cybersecurity tools:
		Template for Cybersecurity for Human Resources
		Guidelines:
		Include steps to validate the return of all organization's assets held by
		workers as part of the procedures for clearing a party upon termination of service.
		Document validation process through an official form (e.g. a clearance)
		form) and require employees to sign it.

	 Expected deliverables: Signed clearance forms include employees' acknowledgment to return all organization's assets, with validation by the concerned department. 		
1-5	Cybersecurity in Change Management		
Objective	To ensure that cybersecurity requirements are included in change management methodology and procedures in order to protect the confidentiality, integrity and availability of information and technology assets as per CSPs policies and procedures, and related laws and regulations.		
Controls			
	Cybersecurity requirements for change management within the CSP shall be identified, documented and approved.		
1-5-P-1	 Template for Cybersecurity requirements checklist on IT and change management projects Develop and document cybersecurity policy for Change Management (including planned and exceptional changes) that include for example requirements for: Prioritize cybersecurity-related changes. Testing before making changes to the production environment in preproduction and pre-development stages. Define roles and responsibilities. Ensure a roll-back of an unsuccessful change. Allow only privileged users to implement a change. Elevate and approve privileges for making changes. Enable audit logs for change implementation. Monitor user activities when implementing changes. Document cybersecurity requirements for change management. Approve cybersecurity requirements for change management both by representatives of cybersecurity and Change Management department. Support the organization's policy by the executive management. This must be done through the approval of the representative. Expected deliverables: Cybersecurity change management policy approved by the organization (e.g., 		
	 electronic copy or official hard copy). Formal approval by the head of the organization or his/her deputy on the policy (e.g., via the organization's official e-mail, paper or electronic signature). 		
1-5-P-2	Cybersecurity requirements for change management within the CSP shall be applied.		

	Guidelines:			
	● Impl orga	ementing all cybersecurity requirements for change management in the nization, including, but not limited to: O Executing approved cybersecurity change management requirements within the organization. This includes secure implementation procedures for planned changes in production systems and exceptional cybersecurity-related change implementation procedures.		
	Expected del			
	man • Docu	Documents confirming the implementation of cybersecurity requirements for change management, as documented in the policy document. Document that clarifies an action plan for implementing cybersecurity requirements for change management.		
	Cybersecurity	for change management in the CSP shall cover, as a minimum:		
		Processes and procedures to securely implement changes (planned works) in production systems, with priority given to cybersecurity observations. Related Cybersecurity Tools:		
		Template for Cybersecurity requirements checklist on IT and change management projects		
		Guidelines:		
1-5-P-3	1-5-P-3-1	 Develop and document change management procedures for implementing planned changes in secure ways, including ensuring that related requirements are implemented and necessary approvals are obtained according to defined roles and responsibilities. 		
		• Ensure that the procedures prioritize changes related to cybersecurity observations.		
		Expected deliverables:		
		 Change management procedures that include prioritizing the implementation of changes related to cybersecurity. 		
		Evidence demonstrating verification of secure procedures during the execution of changes.		
	1-5-P-3-2	Process for the implementation of cybersecurity exceptional changes (e.g.: changes during incident restoration).		

Related Cybersecurity Tools:

 Template for Cybersecurity requirements checklist on IT and change management projects

Guidelines:

- Develop and document change management procedures for implementing planned changes in secure ways, including ensuring that related requirements are implemented and necessary approvals are obtained according to defined roles and responsibilities.
- Include principles and procedures for cybersecurity exceptional change implementation (e.g. user activity monitoring, four-eyes principle in place) to ensure necessary approvals before any change.
- Define technical procedures for quick access (e.g. break glass process) based on approved requirements (e.g. temporal privileged access is granted automatically under specific conditions when the scope of the change is related to a cybersecurity incident).
- Build technical capabilities for that process (e.g. privileged interactive sessions available only through dedicated channels).

Expected deliverables:

- A document that contains procedures for implementing exceptional changes.
- Evidence that shows technical capability for monitoring and control changes.

Cybersecurity requirements for change management within the CSP shall be applied and reviewed periodically.

Related Cybersecurity Tools:

• Template for Cybersecurity Reviewing and Auditing Policies

Guidelines:

- Review and update cybersecurity requirements for change management in the
 organization periodically according to a documented and approved plan for review
 and based on a planned interval, at least annually, or in the event of changes in relevant
 laws and regulations.
- Document and approve review and changes to the organization's cybersecurity requirements for change management by the head of the organization or his/ her deputy.

Expected deliverables:

- Log of updates and changes to the cybersecurity requirements for change management.
- An approved document that sets the policy's review schedule.

1-5-P-4

- Policy indicating that it has been reviewed and updated, and that changes have been documented and approved by the head of the organization or his/her deputy.
- Formal approval by the head of the organization or his/her deputy on the updated policy (e.g., via the organization's official e-mail, paper or electronic signature).

2-1	Asset Management			
Objective	To ensure that the CSP and CST has an accurate and detailed inventory of information and technology assets in order to support the organization's cybersecurity and operational requirements to maintain the confidentiality, integrity and availability of information and technology assets.			
Controls				
	In addition to controls in the ECC control 2-1, the CSP shall cover the following additional controls for cybersecurity requirements for cybersecurity event logs and monitoring management, as a minimum:			
		Inventory of all information and technology assets using suitable techniques such as Configuration Management Database (CMDB) or similar capability containing an inventory of all technical assets.		
		Related Cybersecurity Tools:		
		Template for Asset Management Policies		
		Template for Asset Management that contains Classification guide		
		Guidelines:		
2-1-P-1		 Identify types of information and technology assets in use (e.g. using Asset Discovery techniques, scans, etc.). 		
	2-1-P-1-1	 Identify types of information and technology assets used in the dedicated assets for cloud computing systems (such as virtual servers, cloud storage, application firewall, etc.). 		
		 Maintain CMDB-class technology to capture all information and technical assets. 		
		 Update Asset Inventory automatically to capture fluent changes in cloud asset landscape. 		
		Expected deliverables:		
		 Asset inventory techniques are identified and utilized. 		
		 Document outlining the inventory of technical assets specific to cloud systems. 		
		 Organization's information and technology assets information is maintained within an asset inventory (e.g. CMDB). 		
	2-1-P-1-2 Identifying assets owners and involving them in the asset management lifecycle.			

		Related Cybersecurity Tools:	
		Template for Asset Management Policies	
		Guidelines:	
		Identify duties and obligations (e.g.: regulatory, contractual) associated	
		with assets (e.g.: approve changes related to assets, manage accesses to assets).	
		 Define and document Roles and Responsibilities for assets in the asset management lifecycle (e.g.: create, deploy, manage, dispose) and communicate them with asset owners. 	
		 Assign owners to information and technology assets to ensure that all information or technology asset has an owner. 	
		Expected deliverables:	
		 Document outlining asset inventory and owners assigned to the assets. 	
		Evidence demonstrating that roles and responsibilities of asset owners	
		are aligned with their respective assets.	
	71 W 1		
2-2	Identity and A	Access Management	
Objective	To ensure the secure and restricted logical access to information and technology assets in order to prevent unauthorized access and allow only authorized access for users which are necessary to accomplish assigned tasks.		
	to decompnon	assigned tasks.	
Controls			
Controls	In addition to additional sub	sub controls in the ECC control 2-2-3, the CSP shall cover the following controls for cybersecurity requirements for identity and access management as a minimum:	
Controls	In addition to additional sub	sub controls in the ECC control 2-2-3, the CSP shall cover the following controls for cybersecurity requirements for identity and access management

	In addition to additional sub requirements,	sub controls in the ECC control 2-2-3, the CSP shall cover the following controls for cybersecurity requirements for identity and access management as a minimum: Identity and access management of generic accounts credentials for accountability cannot be assigned for a specific individual. Related Cybersecurity Tools: • Template for Identity and Access Management Standards, encompassing password management • Template for Identity and Access Management Policy • Template for Standards on Devices with Sensitive Privileges	
	In addition to additional sub requirements,	sub controls in the ECC control 2-2-3, the CSP shall cover the following controls for cybersecurity requirements for identity and access management as a minimum: Identity and access management of generic accounts credentials for accountability cannot be assigned for a specific individual. Related Cybersecurity Tools: Template for Identity and Access Management Standards, encompassing password management Template for Identity and Access Management Policy Template for Standards on Devices with Sensitive Privileges Guidelines: Identify both privileged and non-privileged generic accounts (e.g.:	

	establishing a policy for acceptable account usage, specifying authorized access, usage scenarios, and permissible procedures)
	 Expected deliverables: Document outlining the list of users of generic accounts (service accounts, technical accounts, etc.). Technical restrictions applied to the use and management of generic accounts.
	Secure session management, including session authenticity, session lockout, and session timeout termination. Related Cybersecurity Tools: • Template for Identity and Access Management Standards, encompassing password management • Template for Identity and Access Management Policy
2-2-P-1-2	 Template for Standards on Devices with Sensitive Privileges Guidelines: Tunnel sessions through authenticated proxies with capability to lockout sessions and terminate due to inactivity (e.g.: use of cloud native bastion services, when applicable) Configure session management system for session lockouts and session timeouts (e.g.: the session lockout after 15 minutes and timeout after 10 minutes of inactivity)
2-2-P-1-3	 Expected deliverables: Evidence demonstrating configurations applied to sessions, including authenticity, lockout, and timeout. Multi-factor authentication for privileged users, and candidates of personnel with access to Cloud Technology Stack.

	Related Cybersecurity Tools:
	Template for Identity and Access Management Standards,
	encompassing password management
	Template for Identity and Access Management Policy
	Template for Standards on Devices with Sensitive Privileges
	Guidelines:
	Define privileged roles and identities that have access to Cloud
	Technology Stack (e.g. Engineers, Operators, Administrators)
	Build a mandatory multi-factor authentication (e.g. using software
	tokens, SMS messages) policy and assign it to privileged users or
	groups of users.
	Expected deliverables:
	 List of privileged accounts with access to Cloud Technology Systems (CTS).
	 Multi-factor authentication technologies for access to privileged
	accounts that have access to cloud technology systems (CTS).
	Formal process to detect and prevent unauthorized access (e.g. unsuccessful login attempt threshold).
	Related Cybersecurity Tools:
	Template for Identity and Access Management Standards, encompassing password management
	Template for Identity and Access Management Policy
	Template for Standards on Devices with Sensitive Privileges
	Guidelines:
2-2-P-1-4	Define and implement an Identity and Access Management (IAM) process that includes the purpose, and governance of how a CSP
	must address unauthorized access threat for their respective
	defined scope. The process description contains as minimum:
	Accepted user authentication methods with configuration
	(e.g. password complexity policy, MFA usage).
	O Conditional access requiring certain criteria to be met
	before granting access.
	O User authentication monitoring for anomalies and
	suspicious behaviour (e.g. many unsuccessful logins in a
	row, impossible travel).

		 Enable self-service password to reset and password management Configure e-mail/mobile notifications for cloud account authentications to make sure the account owner is notified
		about account authentications
		 Expected deliverables: Authentication and monitoring of Accesses. The number of allowed access attempts is limited and the account is temporarily closed if the limit is exceeded. Sample of system configuration and monitoring report. Access attempt alerts.
		Utilizing secure methods and algorithms for saving and processing passwords, such as: Secure Hashing functions.
		 Related Cybersecurity Tools: Template for Identity and Access Management Standards, encompassing password management Template for Identity and Access Management Policy Template for Standards on Devices with Sensitive Privileges Guideline:
	2-2-P-1-5	 Store passwords (both locally and centrally) in an irreversible form (e.g. using secure hashing functions). Use approved cryptography hash functions. Review these functions periodically to prevent compromised or insufficient functions.
		 Use cryptographic salt to create unique password hashes even if users choose the same passwords. Utilizing the mentioned algorithms and functions in national encryption standards(advanced level)
		 Expected deliverables: Evidence that demonstrates a sample of stored passwords. Document outlining the applied standard to the storage of passwords.

	Secure management of third-party personnel's accounts.
	Related Cybersecurity Tools:
	Template for Identity and Access Management Standards,
	encompassing password management
	Template for Identity and Access Management Policy
	Template for Standards on Devices with Sensitive Privileges
	Guideline:
	 Define and implement Identity and Access Management (IAM) restrictions for accounts of third parties such as service providers, contractors, etc.
	 Define and implement procedures for managing third party accounts, including creating, monitoring and revocation, and obtaining the necessary approvals for each phase.
	 Enable event logs for third-party accounts and monitor their related activities.
2-2-P-	● Use clear label for third party accounts.
	 Use Federated Identities and Authentication services and identities (e.g.: ADFS, SAML2, oAuth2) for third parties' accounts.
	 Periodic review of accounts and privileges according to a defined review plan.
	Expected deliverables:
	 Restrictions implemented to third party accounts based on approved standards.
	 Procedures adopted for managing third party accounts during their life cycle.
	 A sample of third party account requests showing obtaining the necessary approvals.
	 Sample of third-party account activity monitoring logs.
	Defined labels for third party accounts.
	Implemented Federated Identities and Authentication.
	 Third party's accounts and privileges review plan and reports.
2-2-P-	-7 Access control enforced to management systems, and administrative consoles.

Related Cybersecurity Tools:

- Template for Identity and Access Management Standards, encompassing password management
- Template for Identity and Access Management Policy
- Template for Standards on Devices with Sensitive Privileges

Guidelines:

- Identify and inventory management systems and administrative consoles, and review them periodically.
- Obtain the necessary approvals before assigning any access to the administrative and management systems.
- Review access privileges to management systems and administrative consoles periodically.
- Use Privilege Access Management (PAM) technology to control access to administrative and management systems and encrypt communication through the network.
- Enable Multi-Factor Authentication (MFA) for access to management systems and administrative consoles.
- Activate and monitor event logs on activities related to accessing management systems and administrative consoles, and record access sessions.

Expected deliverables:

- List of management systems and administrative consoles.
- A sample of requests for access to management systems and administrative consoles.
- A plan to review the access privileges to management systems and administrative consoles and review reports.
- Evidence of using Privilege Access Management (PAM) technology to access management systems and administrative consoles.
- Evidence of encryption of access communications through the network for management systems and administrative consoles and a list of activated encryption algorithms.
- Evidence of Multi-Factor Authentication (MFA) implementation.
- A sample of event monitoring and related alerts from Security Information and Event Management (SIEM).

		• A sample of recording of sessions.
		Masking of displayed authentication inputs, especially passwords, to prevent shoulder surfing.
2-2-	-P-1-8	Related Cybersecurity Tools:
		Expected deliverables: • Evidence that demonstrates the implementation of obfuscation and masking of sensitive and personal information.
		Getting CST's approval before accessing any CST-related asset by the CSP or CSP's third parties.
2-2-	-P-1-9	 Related Cybersecurity Tools: Template for Identity and Access Management Standards, encompassing password management Template for Identity and Access Management Policy Template for Standards on Devices with Sensitive Privileges Guidelines: Make CST's approval a prerequisite before allowing any access to its
		associated assets or data by the CSP, provided that obtaining consent must be through approved channels between the CST and the CSP. Expected deliverables: The approved access request procedures to access the CST's assets or data approved by the CSP. A sample of approval requests.
2-2-	-P-1-10	Capability to immediately interrupt a remote access session and prevent any future access for a user.

		Related Cybersecurity Tools:
		Template for Identity and Access Management Standards,
		encompassing password management
		Template for Identity and Access Management Policy
		Template for Standards on Devices with Sensitive Privileges
		Guidelines:
		Tunnel remote sessions through an authenticated proxy.
		Configure proxy to terminate immediately the session under defined
		conditions (e.g.: policy violation).
		Configure a proxy to stop accepting connections from specific sources
		or users.
		Expected deliverables:
		Establish controlled remote access sessions.
		Sample of system/proxy configurations.
	2-2-P-1-11	Provision to CSTs of Multi-factor authentication services for privileged cloud
		users.
		Related Cybersecurity Tools:
		Template for Identity and Access Management Standards,
		encompassing password management
		Template for Identity and Access Management Policy
		Template for Standards on Devices with Sensitive Privileges
		Template for Standards on Network Detection and Response (NDR)
		Guidelines:
		 Identify privileged cloud service user roles and groups, and enable the functionality of MFA for these users.
		Expected deliverables:
		Evidence demonstrating that cloud services are authenticated using
		MFA.
	2-2-P-1-12	Assurance of restricted and controlled access to storage systems and means (such as Storage Area Network (SAN)).

		Related Cybersecurity Tools:
		Template for Identity and Access Management Standards,
		encompassing password management
		Template for Identity and Access Management Policy
		Template for Standards on Devices with Sensitive Privileges
		Template for Storage Media Security Policy
		Guidelines:
		Define cybersecurity requirements for access to storage systems.
		 Identify and inventory storage systems, including their types, owners, and the users who have access to them.
		Define and implement Access Policy dedicated to storage systems that include the purpose, and governance of how a CSP must address unauthorized access threats to these systems.
		 Segregate storage and computing systems physically and logically from other systems.
		 Restrict access to these systems and not allow access without obtaining the necessary approvals.
		Expected deliverables:
		Access Policy for storage systems.
		The asset register containing storage systems.
		 Sample of access policy for storage implementation.
		Sample of architecture design of storage systems.
		Sample access requests for storage systems.
2-3	Information S	ystem and Information Processing Facilities Protection
Objective		protection of information systems and information processing facilities kstations and infrastructures) against cyber risks.
Controls		
2-3-P-1	additional sub	sub controls in the ECC control 2-3-3, the CSP shall cover the following controls for cybersecurity requirements for information system and processing ction requirements, as a minimum:
	2-3-P-1-1	Ensuring that all configurations are applied in accordance with CSP's cybersecurity standards.

	Related Cybersecurity Tools:
	Template for Server Security Policy
	Template for Server Security Standards
	Template for Virtual System Security Standards
	Template for Proxy Server System Standards
	Template for Configuration and Hardening Policy
	Guidelines:
	Document and approve cybersecurity standards for information systems.
	Configure information systems based on the approved standards before
	deployment and before implementing changes.
	Verify periodically information systems configurations based on the
	approved standards.
	Monitor changes to configurations.
	Restrict modification rights of configurations to privileged roles.
	Manage modifications of configurations in a formal Change
	Management process.
	Expected deliverables:
	Approved cybersecurity standards for information systems.
	Checklist for applying standards to configurations before deployment
	and before changes are applied.
	Review plan for information systems configurations and review reports.
	Sample event logs for monitoring changes to configurations.
	Restrictions applied to modifying configurations and the list of workers
	with permission to change configurations.
	A sample of configurations change requests.
	Assurance of separation and isolation of data, environments and information systems across CSTs, to prevent data commingling.

		 Template for Virtual System Security Standards 	
		Template for Proxy Server Systems Standards	
		Guidelines:	
		 Provide EDR techniques and mechanisms to detect, prevent, and 	
		protect against programs, suspicious activities, and malware.	
		Ensure that the technologies provided are up-to-date and contain	
		advanced and persistent attacks (APT) protection.	
		Review the protection system periodically to ensure that the scope of	
		the protection system is comprehensive for all users' devices, party	
		systems, and servers through the control unit of the protection system.	
		 Develop and implement a corrective action plan (when needed) to 	
		install the protection system on all devices.	
		Follow up the protection system periodically to ensure the updates are	
		released on all users' devices, the party's systems and servers.	
		Expected deliverables:	
		EDR systems implemented across all devices and servers.	
		 EDR systems configurations review plan and reports. 	
		EDR systems updates plan and reports.	
2-4	Networks Secu	rity Management	
Objective	To ensure the protection of CSP's and CST's network from cyber risks.		
Controls			
		sub controls in the ECC control 2-5-3, the CSP shall cover the following	
2-4-P-1	additional sub controls for cybersecurity requirements for networks security management requirements, as a minimum:		
	2-4-P-1-1	Monitoring of traffic across the external and internal networks to detect anomalies.	

		Related Cybersecurity Tools:
		Template for Network Security Standards
		Template for Network Security Policy
		Guidelines:
		Define scope for Network Anomaly Detection.
		Identify all internal and external networks and network routes.
		Establish methods and thresholds for effective Anomaly Detection
		considering low False Positives rates.
		Implement a monitoring solution considering traffic volume.
		Correlate network events with other security events.
		Periodically review correlations rules.
		Consider AI-based anomaly detection methods.
		Expected deliverables:
		Inventory of network flows.
		 Anomaly detection rules defined on detection tools.
	2-4-P-1-2	Network isolation and protection of Cloud Technology Stack network from other internal and external networks.
		Related Cybersecurity Tools:
		Template for Network Security Standards
		Template for Network Security Policy
		Guidelines:
		Identify potential risks related to Cloud Technology Stack network and
		apply relevant protection.
		Isolate physically or logically (e.g.: Software Defined Networks)
		networks for Cloud Technology Stack and internal and external
		networks.
		Expected deliverables:
		Threat Model for Cloud Technology Stack network.
		 Network-level controls implementation.
		Architecture design documentation.
	2-4-P-1-3	 Architecture design documentation. Protection from denial-of-service attacks (including Distributed Denial of Service (DDoS)).

		Related Cybersecurity Tools:
		Template for Network Security Standards
		Template for Network Security Policy
		Template for Distributed Denial of Service (DDos) Protection Standard
		Guidelines:
		 Identify networks exposed to denial-of-service and distributed denial of service attacks.
		Establish network monitoring to detect volumetric attacks.
		 Conduct deep packet analysis to detect bot-generated traffic for black- holing.
		 Utilize technologies and techniques to stop and prevent DDoS attacks.
		Expected deliverables:
		 A document or report demonstrating that Denial of Service threats are
		analysed, detected and mitigated.
		Protection of data transmitted through the network; from and to the Cloud Technology Stack network using cryptography primitives; for management and administrative access.
		Related Cybersecurity Tools:
		Template for Network Security Standards
		Template for Network Security Policy
		Guidelines:
	2-4-P-1-4	 Encrypt Cloud Technology Stack management and administrative network connection (both interactive and non-interactive - API) with strong encryption mechanisms using random number generators, entropy sources, and basic memory or math operations that are required by the cryptographic algorithms.
		Expected deliverables:
		Evidence illustrating that Cloud Technology management networks are strongly encrypted.
		Access control between different network segments.
		Related Cybersecurity Tools:
	2-4-P-1-5	Template for Network Security Standards
		Template for Network Security Policy
		Guidelines:
		Enforce only authenticated traffic between different network segments.

		Assign the network connection to a user/identity who is responsible for		
		data transfers between network segments.		
		Manage authorizations to establish connections across network		
		segments.		
		Expected deliverables:		
		 Network connections assigned to authenticated users/identities. 		
		Access control list.		
		Isolation between cloud service delivery network, cloud management network and CSP enterprise network.		
		Related Cybersecurity Tools:		
		Template for Network Security Standards		
		Template for Network Security Policy		
		Guidelines:		
	2-4-P-1-6			
		Segregate physically or logically corporate networks from networks		
		related to cloud services and cloud management and build isolation		
		mechanisms (e.g.: Software Defined Networks) for these networks.		
		Expected deliverables:		
		 Isolation mechanisms for networks. 		
		Architecture design documentation.		
2-5	Mobile Device	es Security		
	To ensure the	protection of mobile devices (including laptops, smartphones, and tablets) from		
Objective	cyber risks and to ensure the secure handling of the CSPs' and CSTs' information (including			
	sensitive information) while utilizing mobile devices.			
Controls				
	In addition to sub controls in the ECC control 2-6-3, the CSP shall cover the following			
	additional sub controls for cybersecurity requirements for mobile device security, as a			
	minimum:			
		Inventory of all end user and mobile devices.		
2-5-P-1		Related Cybersecurity Tools:		
		Template for User Devices, Mobile Devices, and Personal Devices		
	2-5-P-1-1	Security Policy		
		Template for User Devices Security Standard		
		Template for Mobile Devices Security Standard		
		Guidelines:		
L	l .			

	 Maintain the inventory of all end-user devices (e.g.: laptops, tablets) and mobile devices (e.g. smartphones, smartwatches) and their owners and users. Consider both CSP-owned and BYOD. Periodically (e.g. annually) review the inventory
	Expected deliverables:
	 Maintained inventory of end-user and mobile devices.
	Periodic reviews reports.
	Centralized mobile device security management.
	Related Cybersecurity Tools:
	 Template for User Devices, Mobile Devices, and Personal Devices Security Policy
	Template for User Devices Security Standard
	Template for Mobile Devices Security Standard
	Guidelines:
2-5-P-1-2	 Define requirements for centralized platform to manage security of mobile devices (e.g.: apply security policy, enforce PIN to unlock device, wipe device)
	Select and deploy centralized security management platform/product
	On-board all mobile devices in business use to that platform
	Expected deliverables:
	All mobile devices centrally managed in terms of security.
	Sample of system configuration.
	Screen locking for end user devices.
	Related Cybersecurity Tools:
	Template for Configuration and Hardening Policy
2-5-P-1-3	 Template for User Devices, Mobile Devices, and Personal Devices Security Policy
	Template for User Devices Security Standard
	Template for Mobile Devices Security Standard
	Plan for Cybersecurity Awareness Program
	Guidelines:
· · · · · · · · · · · · · · · · · · ·	

		 Define screen lock policy and relevant parameters (e.g. timeout, unlock methods).
		• Enforce that policy by configuring end user devices accordingly (e.g. using Active Directory GPO, end-point agents or MDM)
		Make users aware to lock screen manually when they are not close to
		them.
		Expected deliverables:
		 Screen lock policy enforced to user devices.
		 Documents illustrating user awareness methods for manually locking
		the screen when they are not in proximity to their devices.
		Data sanitation and secure disposal for end-user devices, especially for those with exposure to the Cloud Technology Stack.
		Related Cybersecurity Tools:
		Template for User Devices, Mobile Devices, and Personal Devices
		Security Policy
		Template for User Devices Security Standard
		Template for Mobile Devices Security Standard
	2-5-P-1-4	Guidelines:
	2-5-P-1-4	Identify end-user devices and technologies exposed to the Cloud
		Technology Stack (e.g.: MS Windows, Linux, Apple iOS)
		 Select effective data sanitation and disposal methods relevant to these technologies.
		 Dispose securely these devices (and data) when necessary.
		Expected deliverables:
		Approved and implemented data sanitation and device disposal tools
		and methods for Cloud Technology Stack - related end-user devices.
2-6	Data and In	formation Protection
Objective	To ensure the confidentiality, integrity and availability of CSPs' and CSTs' data and information as per organizational policies and procedures, and related laws and regulations.	
Controls		
2-6-P-1	additional su	o sub controls in the ECC control 2-7-3, the CSP shall cover the following b controls for cybersecurity requirements for data and information protection s, as a minimum:
[

J
ent other
ies.
on

ms
mination
ti ()

		Guidelines:
		Monitor contracts with CSTs regarding their expiration or termination.
		Dispose CST's data as soon as possible when there is no valid contract.
		Dispose CST's data using approved methods to ensure this process is
		irreversible considering used data storage technical methods and data
		recovery technical capabilities.
		Expected deliverables:
		Contract statuses monitoring
		Records of disposed CSTs data with specification of the disposal
		methods used.
		Commitment to maintain the confidentiality of the CST's data and information, according to related legal and regulatory requirements.
		Guidelines:
		Identify and analyse legal and regulatory requirements for storing and
	2-6-P-1-4	processing CST's data (e.g.: data encryption).
		Expected deliverables:
		 Ensure storing and processing CST's data is subject to legal and
		regulatory regulations.
-	2-6-P-1-5	Providing CSTs with secure means to export and transfer data and virtual
		infrastructure
		Guidelines:
		Build cloud services with embedded functionalities to export and
		transfer data and virtual infrastructure out over a secured, encrypted
		connection or channel.
		Expected deliverables:
		 Secure data/assets export functionalities over an encrypted and secure channel or connection.
2-7	Cryptography	
Objective		proper and efficient use of cryptography to protect information assets as per dures, and related laws and regulations.
Controls		

	In addition to sub controls in the ECC control 2-8-3, the CSP shall cover the following additional sub controls for cryptography, as a minimum:		
		Technical mechanisms and cryptographic primitives for strong encryption, in according to the advanced level in the National Cryptographic Standards (NCS-1:2020).	
		Related Cybersecurity Tools:	
		Template for Encryption Standard	
		Template for Encryption Key Management Standard	
	2-7-P-1-1	Template for Encryption Policy	
		Guidelines:	
		 Build encrypted cloud storage services compliant with the National Cryptographic Standards (NCS-1:2020) 	
		Expected deliverables:	
		NCS-1:2020 compliant data encryption mechanisms	
2-7-P-1		Certification authority and issuance capability in a secure manner, or usage of certificates from a trusted certification authority.	
		Related Cybersecurity Tools:	
		Template for Encryption Standard	
		Template for Encryption Key Management Standard	
		Template for Encryption Policy	
	2-7-P-1-2	Guidelines:	
		Build certification authority and issuance capability considering best	
		practices in this area (e.g.: dedicated and isolated environment, strict	
		access control, hardware security modules in place)	
		Review certificates in use if issued by trusted certification authority.	
		Expected deliverables:	
		Installation and activation of a trusted source/authority for	
		accreditation.	
		Trusted and certified certificates	
2-8	Backup and	Recovery Management	
Objective	To ensure the protection of CSPs' data and information including information systems and software configurations from cyber risks as per organizational policies and procedures, and related laws and regulations.		
Controls			

	In addition to	sub controls in the ECC control 2-9-3, the CSP shall cover the following		
	additional sub controls for cybersecurity requirements for backup and recovery management, as			
	a minimum:			
		Securing access, storage and transfer of CST's data backups and its mediums, and protecting it against damage, amendment or unauthorized access.		
		Related Cybersecurity Tools:		
		Template for Backup Policy		
		Template for Backup Standards		
		Template for Storage Media Security Standards		
		Guidelines:		
		Identify risks related to access, storage and transfer of CST's data		
		backups and its media, including those related to damage, amendment		
	2-8-P-1-1	or unauthorized access (e.g.: accidental damage, theft, lost media)		
		Define security measures for secure access, storage and transfer of		
		CST's data backups (e.g. access control, encryption)		
		Implement defined measures.		
		Periodically review implemented security measures to ensure its		
2-8-P-1		applicability.		
		Expected deliverables:		
		List of identified risks.		
		 Defined and applied security measures. 		
		Regular review reports.		
		Securing access, storage and transfer of Cloud Technology Stack backups and its		
		mediums, and protecting it against damage, amendment or unauthorized		
		access.		
		Related Cybersecurity Tools:		
		Template for Backup Policy		
		Template for Backup Standards		
	2-8-P-1-2	Template for Storage Media Security Standards		
		Guidelines:		
		Identify risks related to access, storage and transfer of CTS data		
		backups and its media, including those related to damage, amendment		
		or unauthorized access (e.g.: accidental damage, theft, lost media)		
		Define security measures for secure access, storage and transfer of CTS		
		data backups (e.g. access control, encryption)		

		Implement defined measures.	
		Periodically review implemented security measures to ensure its applicability.	
		Expected deliverables:	
		List of identified risks.	
		Defined and applied security measures.	
		Regular review reports.	
2-9	Vulnerabilities Management		
	To ensure time	ely detection and effective remediation of technical vulnerabilities to prevent or	
Objective	minimize the probability of exploiting these vulnerabilities to launch cyber-attacks against the CSP and CST.		
Controls			
In addition to sub controls in the ECC control 2-10-3, the CSP shall		sub controls in the ECC control 2-10-3, the CSP shall cover the following	
	additional sub controls for cybersecurity requirements for vulnerability management		
	requirements, as a minimum:		
2-9-P-1	2-9-P-1-1	Assessing and remediating vulnerabilities on external components of Cloud Technology Stack at least once every month, and at least once every three months for internal components of Cloud Technology Stack.	

	Related Cybersecurity Tools:
	Template for Security Vulnerability Assessment Procedure, including a registry template for managing discovered vulnerabilities
	Template for Vulnerability Log
	Template for Vulnerability Management Policy
	Template for Vulnerability Management Standard
	Guidelines:
	Define and implement a Threat and Vulnerability Management policy
	that includes the intent, purpose, and governance of how a CSP must
	address threats and vulnerabilities for their respective scope under the
	Security Shared Responsibility Model. At a minimum, the policy
	should specify:
	O The frequency of assessments for external components of
	Cloud Technology Stack - monthly assessments.
	O The frequency of assessments for internal components of
	Cloud Technology Stack - quarterly assessments.
	O Remediation of threats and vulnerabilities for external
	components and internal components must be completed
	based on the severity of the identified threats and
	vulnerabilities.
	O Identify vulnerability detection methods that are in use.
	O What components to be covered under the scope considering
	applicable laws, regulations, and contractual requirements.
	O The vulnerability severity levels relevant to the organization.
	 When and how and to whom vulnerabilities should be reported and reviewed, especially significant vulnerabilities.
	O How remediating actions are tracked for timely and effective
	closure.
	Expected deliverables:
	Threat and Vulnerability Management Policy.
	Sample of assessments.
	Sample of remediation's plans and actions.
2-9-P-1-2	Notification to CSTs of identified vulnerabilities that may affecting them, and safeguards in place.

		Related Cybersecurity Tools:
		Template for Security Vulnerability Assessment Procedure, including a
		registry template for managing discovered vulnerabilities
		Template for Vulnerability Log
		Template for Vulnerability Management Policy
		Template for Vulnerability Management Standard
		Guidelines:
		Report immediately to CSTs detected vulnerabilities (that impact them)
		with sufficient information to analyse related risks and correlate Threat Response on CST side.
		Expected deliverables:
		Reports sent to CSTs about detected vulnerabilities that impact them.
2-10	Penetration T	Testing Testing
Objective	simulated cyb	evaluate the efficiency of the CSP's cybersecurity defense capabilities through er-attacks to discover unknown weaknesses within the technical infrastructure to a cyber-breach.
Controls		
		sub controls in the ECC control 2-11-3, the CSP shall cover the following controls for cybersecurity requirements for penetration testing, as a minimum:

Ensure timely collection, analysis and monitoring of cybersecurity event logs for the proactive detection and effective management of cyber-attacks to prevent or minimize the impact on the CSPs' and CSTs' business.	
additional sub	sub controls in the ECC control 2-12-3, the CSP shall cover the following controls for cybersecurity requirements for cybersecurity event logs and anagement, as a minimum: Activating and protecting event logs and audit trails of Cloud Technology Stack.
	Related Cybersecurity Tools:
	Template for Cybersecurity Event Logs and Monitoring Management Policy
	Template for Cybersecurity Event Logs and Monitoring Management Standard
	Guidelines:
2-11-P-1-1	 Define and implement a Log Management policy that includes the intent, purpose, and governance of how a CSP must enable logging and monitoring of cybersecurity events for their respective scope under the Security Shared Responsibility Model. At a minimum, the policy should specify: The protection methods for logs where these are generated to prevent log tampering or logging technology evasion. The protection methods for logs transmitted to the log repositories to ensure their confidentiality and integrity with encryption. Expected deliverables:
	 Log management policy. Centralized and protected Log base.
	Activating and collecting login attempts history.
2-11-P-1-2	 Related Cybersecurity Tools: Template for Cybersecurity Event Logs and Monitoring Management Policy Template for Cybersecurity Event Logs and Monitoring Management Standard Guidelines:
	In addition to additional submonitoring m

		 Configure authentication mechanisms for logging authentication attempts (e.g.: data, time, authentication method, system/application, user id/Identity) Collect and store that information
		Expected deliverables:
		Stored and recorded login attempts.
		Evidence illustrating mechanisms for verifying login attempts.
		Activating and protecting all event logs of activities and operations performed by the CSP at the tenant level in order to support forensic analysis.
		Related Cybersecurity Tools:
		Template for Cybersecurity Event Logs and Monitoring Management Policy
		Template for Cybersecurity Event Logs and Monitoring Management Standard
	2-11-P-1-3	Guidelines:
		 Define requirements for logging of activities of CSP and CSTs that is sufficiently to support forensic analysis (e.g.: chain of custody)
		Build logging functionality to capture these events/activities and
		protect logs (e.g.: ensure confidentiality, integrity and availability of
		these logs using encryption, HMAC and redundant storage.
		Expected deliverables:
		CSP and CST event/activity log
	2-11-P-1-4	Protecting cybersecurity event logs from alteration, disclosure, destruction and unauthorized access and unauthorized release, in accordance with regulatory, or law requirements.

Related Cybersecurity Tools:

- Template for Cybersecurity Event Logs and Monitoring Management Policy
- Template for Cybersecurity Event Logs and Monitoring Management Standard

Guidelines:

- Identify law and regulatory requirements regarding for audit logs.
- Define and implement a Cybersecurity Log Management and Access
 Control policy that includes the intent, purpose, and governance of
 how a CSP must enable logging and monitoring of cybersecurity
 events for their respective scope under the Security Shared
 Responsibility Model. At a minimum, the policies should specify:
 - O The protection methods for logs where these are generated to prevent log tampering or logging technology evasion.
 - The protection methods for logs transmitted to the log repositories to ensure their confidentiality and integrity with encryption.
 - O Secure log destruction methods.
 - O Restricted Access to logs
 - O Read-only Access to logs

Expected deliverables:

- Cybersecurity event logs protected.
- Restrictions applied to protect the logs.
- Secured log destruction methods.
- List of law and regulatory requirements for audit log.

Continuous cybersecurity events monitoring using SIEM technique covering the full Cloud Technology Stack.

Related Cybersecurity Tools:

2-11-P-1-5

- Template for Cybersecurity Event Logs and Monitoring Management Policy
- Template for Cybersecurity Event Logs and Monitoring Management Standard

Guidelines:

• Define requirements for cybersecurity events monitoring (e.g. capture of user authentications, privilege elevations, software execution)

	Define scope for cybersecurity events monitoring covering Cloud Technology Stack
	 Select and deploy SIEM-class system to monitor cybersecurity event logs.
	Monitor cybersecurity event logs continuously (at least daily).
	Expected deliverables:
	Cybersecurity logs monitored in SIEM
	List of requirements for cybersecurity event monitoring.
	Sample of monitoring reports/alerts.
	Reviewing cybersecurity event logs and audit trails periodically, covering CSP events in the Cloud Technology Stack.
	Related Cybersecurity Tools:
	Template for Cybersecurity Event Logs and Monitoring Management Policy
	Template for Cybersecurity Event Logs and Monitoring Management Standard
	Guidelines:
2-11-P-1-6	 Define scope for CSP event logs reviews covering the Cloud Technology Stack.
	Define criteria for reviews.
	 Select and assign skilled and independent reviewers of cybersecurity event logs/audit trails.
	Review periodically cybersecurity event logs/audit trails.
	Expected deliverables:
	Cybersecurity event logs reviewed by skilled and independent
	reviewers.
	Sample of reports, alerts, use cases.
2-11-P-1-7	Automated monitoring and logging of remote access sessions event logs.

		Related Cybersecurity Tools:
		Template for Cybersecurity Event Logs and Monitoring Management Policy
		Template for Cybersecurity Event Logs and Monitoring Management Standard
		Guidelines:
		Log remote access sessions and relevant events.
		Define markers, indicators and patterns for malicious remote accesses.
		Monitor, detect and block automatically these remote sessions
		Expected deliverables:
		Remote sessions automatically monitored
		Secure handling of user-related data found in the audit trails and the cybersecurity event logs.
		Related Cybersecurity Tools:
		Template for Cybersecurity Event Logs and Monitoring Management Policy
	2-11-P-1-8	Template for Cybersecurity Event Logs and Monitoring Management Standard
		Guidelines:
		Detect user related data event logs/audit trails.
		Anonymize that data using tokens.
		Expected deliverables:
		Personally Identifiable Information anonymized in logs
2-12	Cybersecurity	Incident and Threat Management
Objective	management a	identification and detection of cybersecurity incidents and their effective and proactive response to cybersecurity threats to prevent or minimize the impact resulting on the business of the CSPs.
Controls		
2-12-P-1		sub controls in the ECC control 2-13-3, the CSP shall cover the following controls for cybersecurity requirements for cybersecurity incident and threat as a minimum:
~ .~	2-12-P-1-1	Subscribing in authorized and specialized organizations and groups to stay upto-date on cybersecurity threats, common practices and key know-how.

	Related Cybersecurity tools:
	Template for Cybersecurity Incident and Threat Management Policy
	Template for Cybersecurity Incident and Threat Management
	Standards
	Cybersecurity Incident Response Guidelines
	Template for Cybersecurity Incident Response Detailed Plan
	Guidelines:
	Select trusted external threat intelligence vendors (e.g. OSINT)
	 Monitor publications issued by the National Cybersecurity Authority (NCA) and relevant trusted authorities.
	 Analyse threat intelligence feeds and services for risks relevant to the CSP.
	Confirm common and best practices in Threat Management with
	external cybersecurity advisors and consultants.
	Expected deliverables:
	 List of trusted external threat intelligence vendors.
	Cybersecurity threat intelligence.
	Knowledgebase of common and best practices in cybersecurity.
	Training for employees and third-party personnel to respond to cybersecurity incidents, in line with their roles and responsibilities.
	Related Cybersecurity tools:

	Template for Cybersecurity Incident and Threat Management Standards
	Cybersecurity Incident Response Guidelines
	Template for Cybersecurity Incident Response Detailed Plan
2-12-P-1-5	Guidelines:
2-12-1-1-3	 Analyse legal and regulatory requirements for CSTs.
	Build legal and forensics capabilities to support CTSs in their legal
	obligations relevant to cloud services.
	Build a process to track movement of evidence and ensure integrity of
	evidence during that movement and at rest.
	Expected deliverables:
	Evidence demonstrating the knowledge and understanding of legal and
	regulatory requirements for CSTs.
	 Legal and forensics capabilities are built.
	Movement of evidence are tracked, and their integrity ensured.
	Real-time reporting to the CST of incidents that may affect CST; if the incident is discovered.
	Related Cybersecurity tools:
	Template for Cybersecurity Incident and Threat Management Policy
2-12-P-1-6	Template for Cybersecurity Incident and Threat Management
	Standards
	Cybersecurity Incident Response Guidelines
	Template for Cybersecurity Incident Response Detailed Plan

		Guidelines:
		 Analyse identified incidents for their impact on CSTs (e.g. how CST is using the impacted service).
		Report such incidents immediately to CSTs with sufficient information to analyse related risks and track Incident Response on CSP side.
		Expected deliverables:
		Impact on CSTs is analysed for all identified incidents.
		 Incidents impacting CTSs are immediately reported to CTSs with sufficient information.
		Sample of incidents reported to CST.
		Support for CSTs to handle security incidents according to the agreement between the CSP and CST.
		Related Cybersecurity tools:
		Template for Cybersecurity Incident and Threat Management Policy
		Template for Cybersecurity Incident and Threat Management Standards
		Cybersecurity Incident Response Guidelines
		Template for Cybersecurity Incident Response Detailed Plan
	2-12-P-1-7	Guidelines:
	Z-1Z-F-1-/	 Align incident handling process across CSP and CST before serving services (e.g.: Incident Response systems integration)
		 Report immediately to CSTs incidents (that impact them) with sufficient information to analyse related risks and correlate incident response on the CST side.
		Expected deliverables:
		Incident handling process agreed between CSP and CST and formally
		recognized in contract.
		Process of reporting to CTSs incidents impacting them established.
	2-12-P-1-8	Measuring and monitoring cybersecurity incident metrics and monitor compliance with contracts and legislative requirements

		Related Cybersecurity tools:
		Template for Cybersecurity Incident and Threat Management Policy
		Template for Cybersecurity Incident and Threat Management
		Standards
		Cybersecurity Incident Response Guidelines
		Template for Cybersecurity Incident Response Detailed Plan
		Template for Key Performance Indicator (KPIs) report
		Guidelines:
		 Define contractual and legislative requirements for Cybersecurity Incident Management.
		Establish cybersecurity incident (compliance and effectiveness) metrics
		in form of KPI, KCI (e.g.: Mean Time to Detect, Mean Time to
		Response, Mean Time to Contain).
		• Test the metrics.
		• Formally approve the metrics by authorized person.
		Establish dashboards and compliance reports to report the metrics.
		Periodically review the dashboards and compliance reports.
		Expected deliverables:
		Contractual and legislative requirements register.
		 Formally approved and tested cybersecurity incident metrics (KPI, KCI).
		Metrics dashboards and compliance reports.
		Records form dashboards and compliance reports review.
		Sample of dashboard and compliance report.
2-13	Physical Secur	ity
Objective	_	orotection of CSPs' information and technology assets from unauthorized loss, theft and damage.
Controls		
2-13-P-1		sub controls in the ECC control 2-14-3, the CSP shall cover the following controls for cybersecurity requirements for physical security, as a minimum:
	2-13-P-1-1	Continuous monitoring of access to CSP's sites and buildings.

Related Cybersecurity tools: Template for Physical Security Cybersecurity Policy Template for Physical Security Standards Guidelines: Identify all access points/gates to sites and buildings. Define attack vectors against access points (consider piggy backing, reusing of stolen access tokens, tampering access prevention systems). Define requirements for CSP's sites and building access monitoring. Define a process for effective access monitoring and access violation detection. Implement technical systems for effective access monitoring. Involve trained Analysts when professional judgement is required in the monitoring process. Keep monitoring records - access logs and who and when reviewed these logs for no less than six (6) months.

- Monitor ingress and egress points to service and delivery areas and other points where unauthorized personnel may enter the premises.
- Monitor access by reviewing access logs, access attempts and access recordings.

Record the dates and times of visitor entries and departures and

supervise all visitors unless their access has been previously approved.

Expected deliverables:

- Inventory of sites' and buildings' gates and access points.
- Documentation of defined attack vectors, access monitoring requirements and access monitoring process (procedure or instructions).
- Access logs and records.
- Access logs and records reviews.

2-13-P-1-2 Preventing unauthorized access to devices in the Cloud Technology Stack.

	Related Cybersecurity tools:
	Template for Physical Security Cybersecurity Policy
	Template for Physical Security Standards
	Guidelines:
	Build physical security isolated perimeter for the data storage and
	processing facilities areas, including gates, physical authentication
	mechanisms, access control points and monitoring equipment.
	Place the Cloud Technology Stack devices in secure area the perimeter
	in dedicated server room with access limited to authorized personnel.
	Secure devices in the Cloud Technology Stack using rack cabinet
	enclosures to prevent damage or inserting external devices (e.g. USB
	flash drives, portable SSD drives, etc.).
	Expected deliverables:
	Closed physical perimeter for servers and data storage with access
	control points.
	Devices locked in secure racks preventing from damage and external
	portable devices insertions.
	Disposal of cloud infrastructure hardware storage equipment (external or
	internal), by adopting relevant legislation and best practices.
	Related Cybersecurity tools:
	Template for Physical Security Cybersecurity Policy
	Template for Physical Security Standards
	Guidelines:
	Identify legal regulations and best practices for hardware disposal.
	Define roles and responsibilities in the disposal process.
2-13-P-1-3	Select hardware sanitization methods (e.g. cryptographic erase, media
	degaussing, media physical destruction: pulverizing, burning, melting,
	etc. or industrial shredding) adequate to hardware type ensuring that
	data stored on these devices will not be recoverable.
	Record the hardware disposal process.
	Expected deliverables:
	 Legal regulations and best practices for hardware disposal gathered.
	Formally approved cloud infrastructure hardware disposal policy.

• Hardware disposal records and tracking system.

2-14	Web Application Security		
Objective	Ensure the protection of external web applications of the CSP from cyber risks.		
Controls			
		subcontrols in the ECC control 2-15-3, the CSP shall cover the following controls for cybersecurity requirements for web application security, as a Protecting information involved in application service transactions against	
		possible risks (e.g.: incomplete transmission, misrouting, unauthorized message alteration, unauthorized disclosure).	
		Related Cybersecurity tools:	
		Template for Web Application Security Policy	
		• Template for Web Application Security Standard Guidelines:	
	2-14-P-1-1	 Identify possible risks related to information involved in application service transactions. 	
		 Determine security measures that can be applied to protect information involved in application service transactions against identified risks. 	
2-14-P-1		Implement defined security measures.	
		 Periodically review and update (or add new if relevant) identified risks and implemented measures to ensure its applicability. 	
		 Configure web application firewalls to inspect traffic, apply rules, and perform behavioural monitoring. 	
		Deny access from known malicious or/and bad reputation sources.	
		 Apply Transport Layer Security (TLS, SSL) or other data transmission encryption and integration protection layer. 	
		 Review Periodically the application exposure to the Internet to detect unintentional data exposures. 	
		Deny default or common passwords for applications.	
		 Monitor routing tables for malicious/unintentional changes or service redirections. 	
		 Establish ongoing monitoring of transactions in as near to real-time manner. 	

	Expected deliverables:		
	 Web application firewalls appropriately configured. 		
	Traffic inspection and behavioural monitoring established.		
	 Access from known malicious or/and bad reputation sources denied. 		
	 Data transmission encryption and integration protection layer (TLS, 		
	SSL) applied.		
	Regular application exposure to the Internet review and unintentional		
	data exposure detection set.		
	 Default or common passwords for applications denied. 		
	Identification of malicious/unintentional changes or service		
	redirections in routing tables implemented.		
	 Ongoing monitoring of transactions established. 		
2-15	Key Management		
Objective	Ensure secure management of CSPs' and CSTs' cryptographic keys to protect confidentiality, integrity and availability of information and technical assets.		
Controls	integrity and availability of information and technical assets.		
Controls			
	Cybersecurity requirements for key management process within the CSP shall be identified, documented and approved.		
	Related Cybersecurity tools:		
	Template for Encryption Policy		
	Template for Encryption Key Management Standard		
	Guidelines:		
	• Identify cybersecurity requirements for Key Management aspects (e.g.: key exchange,		
2-15-P-1	storage, usage, ownership) - use questionnaires and conduct workshops with relevant stakeholders.		
	Define Key Management standard to address cybersecurity requirements.		
	Formally approve the standard.		
	Periodically review the standard (e.g.: at least annually)		
	Expected deliverables:		
	Key Management standard that is formally approved and Periodically reviewed.		
	Regular review reports.		
0.15.75	Cybersecurity requirements for key management process within the CSP shall be applied.		
2-15-P-2	Guidelines:		

	• Enforce defined Key Management standard (e.g. Key Management service harden		
	access control restriction, monitoring)		
	 Control the effective implementation of the standard. 		
	Report violations to the standard.		
	Document and manage exceptions.		
	Expected deliv	verables:	
	• Cybe.	rsecurity requirements for key management process are implemented and	
	follov	wed as per defined policy and related documentations.	
		Idition to the ECC sub control 2-8-3-2, cybersecurity requirements for key management in the CSP shall cover, at minimum, the following:	
		Ensure well-defined ownership for cryptographic keys.	
		Related Cybersecurity tools:	
		Template for Encryption Policy	
		Guidelines:	
		Define responsibilities that come with cryptographic keys ownership	
		during entire key lifecycle (e.g.: create a key, authorize to use the key,	
	2-15-P-3-1	dispose the key)	
		 Assign ownership for cryptographic keys to CSP employees. 	
		Review Periodically cryptographic keys for orphans (every key must	
		have an assigned active owner)	
2-15-P-3		Assign owners to new cryptographic keys as a mandatory step when	
		creating keys.	
		Expected deliverables:	
		 Identified Cryptographic keys and owners 	
	2-15-P-3-2	A secure cryptographic key retrieval mechanism in case of cryptographic key	
		lost (such as backup of keys and enforcement of trusted key storage, strictly	
		external to cloud).	
		Related Cybersecurity tools:	
		 Template for Encryption Policy Guidelines: 	
		 Develop and test cryptographic key recovery plans for cryptographic key loss or damage (e.g. print cryptographic keys, put into tagged 	
		envelopes and store in physical safes in trusted and safe external	
		locations like deposit boxes or secure containers in banks)	
	Ì	1	

		Expected deliverables:	
		Cryptographic key retrieval plan	
		Activating and monitoring of all audit trails of keys.	
		Related Cybersecurity tools:	
		Template for Encryption Policy	
		Guidelines:	
		 Log key management activities (e.g.: Creation date, renewal date, 	
		expiration date, decommissioning date, key and certificate details, when	
	2-15-P-3-3	the key was accessed by users and for what purpose, any additional	
		details required by legal or regulatory requirements).	
		Build a SIEM-class monitoring capability for these logs	
		Expected deliverables:	
		Compare the list of active cloud services to the list of monitored cloud	
		services.	
		Sample of SIEM reports/alerts/use cases.	
	Cybersecurity	requirements for key management within the CSP shall be reviewed periodically.	
	Related Cybersecurity tools:		
	• Temp	plate for Cybersecurity Reviewing and Auditing Policy	
	• Temp	plate for the Lifecycle Management of Cybersecurity Policies, Procedures, and	
	Stand	lards, covering Development, Implementation, Assessment and Periodic Reviews	
2-15-P-4	Guidelines:		
	• Review	w periodically cybersecurity requirements for key management, at least annually.	
	• Maint	ain records of periodical reviews (e.g.: who and when reviewed and a change	
	log).		
	Expected deliv		
	Cyber	security requirements for Key Management reviewed Periodically.	
	• Period	lic review logs.	
2-16	System Develo	opment Security	
Objective	Ensure CSPs' s	systems are developed, integrated and deployed in a secure manner.	
Controls			
2-16-P-1	Cybersecurity documented as	requirements for system development within the CSP shall be identified, approved.	

	Related Cybersecurity tools:			
	 Template for Secure Software Development Lifecycle Policy Guidelines: 			
		fy cybersecurity requirements for system development using questionnaires and hops with relevant stakeholders.		
	• Docur	ment these requirements (Cybersecurity standard for System Development).		
	Expected deliverables:			
	· ·	security requirements for system development are formally approved and lically reviewed.		
	Cybersecurity	requirements for system development within the CSP shall be applied.		
	Guidelines:			
	• Enforc	ce Cybersecurity standard for System Development.		
	• Measu	re compliance with that standard.		
	Manage exceptions for this standard.			
2-16-P-2	Escalate violations regarding this standard.			
	Expected deliv	erables:		
	Enfor	ced cybersecurity requirements for system development.		
	• Docu	ment outlining the implementation of the compliance measurement tool for		
	stand	ard implementation.		
	• Docu	ments for violation escalation procedures.		
		requirements for system development within the CSP shall include as a following controls along the development lifecycle:		
		Considering cybersecurity requirements of the Cloud Technology Stack and		
		relevant systems in the design and implementation of the cloud computing		
		services.		
		Related Cybersecurity tools:		
2-16-P-3		Template for Secure Software Development Lifecycle Policy		
	2-16-P-3-1	Guidelines:		
	Z-10-P-3-1	Identify cybersecurity requirements of the Cloud Technology Stack and relevant systems for cloud comparing convices.		
		and relevant systems for cloud computing services.		
		 Apply identified requirements both during design and implementation of the cloud computing services. 		
		Periodically review the compliance with the requirements and monitor		
		whether new applicable requirements occurred.		

	Expected deliverables:		
	Sample of compliance review.		
	 Applied cybersecurity requirements. 		
	Protecting system development environments, testing environments (including		
	data used in testing environment), and integration platforms.		
	Related Cybersecurity tools:		
	Template for Secure Software Development Lifecycle Policy		
	Guidelines:		
	Identify risks related to development environments, testing		
	environments and integration platforms.		
	Develop and implement protection measures to provide secure		
	development and testing environment, as well as secure integration		
	platforms, taking account of identified risk		
	Ensure that protection of data used in testing environment is included		
	in the implemented protection measures.		
	Expected deliverables:		
	List of identified risks.		
	Evidence confirming the identification of preventive measures and		
	ensuring the protection of data used in the testing environment.		
	Cybersecurity requirements for system development within the CSP shall be applied and		
	reviewed periodically.		
	Related Cybersecurity tools:		
	Template for Cybersecurity Reviewing and Auditing Policy		
	Template for Developing Cybersecurity Documentation Procedures		
	Guidelines:		
2-16-P-4	Review requirements Periodically based on defined timeframes, at least annually.		
Z-10-P-4	Define Roles and Responsibilities in the review process.		
	Update requirements, if applicable.		
	Maintain records of periodical reviews (e.g.: who and when reviewed and a change		
	log).		
	Expected deliverables:		
	Current cybersecurity requirements for system development.		
	Sample of periodical reviews.		
2-17	Storage Media Security		
2-1/-	Storage Media Security		

Objective	Ensure CSPs' secure handling of information and data on physical media.				
Controls					
	Cybersecurity requirements for usage of information and data media within the CSP shall be identified, documented and approved.				
	Guidelines:				
2-17-P-1	• Identify cybersecurity requirements for usage of information and media (e.g.: labelling, encryption, secure storage, secure disposal) - use questionnaires and conduct workshops with relevant stakeholders.				
	• Define	e Information and Data Media Usage standard to document these requirements.			
	• Forma	ally approve the standard.			
	• Period	lically review the standard (e.g.: annually)			
	Expected delive	erables:			
	Information and data media usage standard				
	Cybersecurity requirements for usage of information and data media within the CSP shall be applied.				
	Guidelines:				
2-17-P-2	• Enforce Cybersecurity standard for Information and Data Media Usage (e.g.: access control, encryption)				
	Expected deliverables: • Information and data media labelled, securely stored and disposed.				
	1 '	requirements for usage of information and data media within the CSP shall num, the following:			
		Enforcement of sanitization of media, prior to disposal or reuse.			
2-17-P-3	2-17-P-3-1	 Guidelines: Define requirements for media sanitization to ensure that storage media is erased in a secure manner (e.g.: the process is irreversible). Define media sanitization methods (e.g. overwrite storage media with random input data several times, destroy or overwrite encryption keys, degaussing) Select sanitization tools that implement defined methods. Enforce sanitization of media by making it a mandatory step in media reuse or disposal process (e.g.: build a proper process flow) 			

		Expected deliverables: • Media sanitization tools in use.
		Using secure means when disposing of media.
		Guidelines: • Define requirements for secure disposal of media.
		Identify methods for disposal that meet these requirements.
	2-17-P-3-2	 Apply accepted methods for the secure disposal of data from storage media.
		Ensure that data is not recoverable using any means.
		Expected deliverables: • Defined requirements and acceptable methods for disposal of media.
		Provision to maintain confidentiality and integrity of data on removable media.
		Guidelines: • Identify risks related to confidentiality and integrity of data on removable media (e.g. media theft).
		Define applicable controls and requirements for data confidentiality and integrity on removable media (e.g.: encryption, physical security).
	2-17-P-3-3	Apply applicable security measures to ensure data confidentiality and integrity on removable media.
		Periodically review and update the controls and requirements to ensure its applicability.
		Expected deliverables: • List of identified risks.
		Defined controls and requirements for data on removable media.
		Regular review reports.
		Human readable labelling of media, to explain its classification and the sensitivity of the information it contains.
	2-17-P-3-4	Establish clear labelling rules of the media including its classification and the sensitivity of information (e.g. Top secret, Secret, Restricted) Ensure that used classification and sensitivity levels are well-defined and communicated.

		 Ensure that each media in use is labelled according to the established rules. Ensure that each new media to be used is labelled according to the established rules. Expected deliverables:
		 Established labelling rules. Each media is labelled according to established rules.
		Controlled and physically secure storage of removable media.
		Guidelines: • Identify risks related to storage of removable media (e.g. media theft)
	2-17-P-3-5	 Define applicable controls (including physical controls) and requirements for secure storage of removable media, taking account of identified risks.
		Apply these controls (e.g. access control, HVAC)
		 Expected deliverables List of identified risks for storing removable media. Controls and requirements for secure storage of removable media.
		Restriction and control of usage of portable media inside the Cloud Technology Stack.
	2-17-P-3-6	 Guidelines: Identify risks related to usage of portable media inside the Cloud Technology Stack (e.g. media theft) Define and approve adequate restrictions and controls of portable media inside the Cloud Technology Stack taking account of identified risks. Implement the restrictions and controls (e.g. encryption, ownership, RFID tags). Expected deliverables: List of identified risks for using external storage media on the Cloud Technology Stack.
		 Approved restrictions and controls for using external storage media on the Cloud Technology Stack.

Cybersecurity requirements for usage of information and data media within the CSP shall be applied and reviewed periodically.

Related Cybersecurity tools:

- Template for Cybersecurity Reviewing and Auditing Policy
- Template for Developing Cybersecurity Documentation Procedures

Guidelines:

2-17-P-4

- Review requirements Periodically based on defined timeframes, at least annually.
- Define Roles and Responsibilities in the review process.
- Update requirements, if applicable.
- Maintain records of periodical reviews (e.g.: who and when reviewed and a change log).

Expected deliverables:

- Current cybersecurity requirements for usage of information and data media
- Periodical review logs.

(Cybersecurity Resilience)

3-1	Cybersecurity Resilience Aspects of Business Continuity Management (BCM)	
Objective	To ensure the inclusion of the cybersecurity resiliency requirements within the CSPs' and CSTs' business continuity management and to remediate and minimize the impacts on systems, information processing facilities and critical e-services from disasters caused by cybersecurity incidents.	
Controls		
	additional sub	sub controls in the ECC control 3-1-3, the CSP shall cover the following controls for cybersecurity requirements for cybersecurity resilience aspects of nuity management, as a minimum:
		Developing and implementing disaster recovery and business continuity procedures in a secure manner.
3-1-P-1	3-1-P-1-1	 Related Cybersecurity tools: Template for Cybersecurity Policy within Business Continuity Guidelines: Define requirements for disaster recovery and business continuity procedures, taking account of identified risks related to cloud computing. Develop, approve and implement disaster recovery and business continuity procedures/plans including security measures, taking account of defined requirements. Clearly communicate and make the documents available for the relevant authorized personnel. Test the procedures Periodically and upon significant changes to ensure its applicability.
		 Expected deliverables: Disaster Recovery Procedure/Plan for cloud computing. Business Continuity Procedure/Plan for cloud computing.
	3-1-P-1-2	Developing and implementing procedures to ensure resilience and continuity of cybersecurity systems dedicated to the protection of Cloud Technology Stack.

Related Cybersecurity tools:

• Template for Cybersecurity Policy within Business Continuity

Guidelines:

- Develop procedures to ensure resilience and continuity that are specific to cybersecurity of Cloud Technology Stack.
- Review Periodically these procedures.
- Make resilience and continuity mechanisms an Architectural Principle for cybersecurity.
- Develop catalogue of resilience and continuity assurance techniques and methods

Expected deliverables:

- Document outlining enhanced measures to ensure resilience and continuity of cybersecurity systems dedicated to protecting the Cloud Technology Stack.
- Periodical review reports and documents.
- Evidence illustrating techniques and methods ensuring resilience and continuity.

4-1	Supply Chain and Third-Party Cybersecurity		
Objective	To ensure the protection of assets against the cybersecurity risks related to third-parties including outsourcing and managed services as per policies and procedures, and related laws and regulations.		
Controls	1		
		to implementing the ECC controls 4-1-2 and 4-1-3, the CSP shall cover the following ub controls for third-party cybersecurity requirements, as a minimum:	
		Ensure that the CSP fulfills NCA's requests to remove software or services, provided by third-party providers that may be considered a cybersecurity threat to national organizations, from the marketplace provided to CSTs.	
		Related Cybersecurity tools:	
		Template for Cybersecurity Policy Regarding Third-Party	
		Guidelines:	
	41.7.1.1	 Maintain a catalogue of third-party providers and their software available to CSTs. 	
4-1-P-1	4-1-P-1-1	• Establish a robust process to remove specific software from the marketplace based on NCA's requests.	
		 Introduce appropriate legal statements allowing CSP to remove from the marketplace any software considered as cybersecurity threat. 	
		Expected deliverables:	
		 Review the catalogue of third-party software providers and their software. 	
		 A document outlining procedures for removing specific programs from the market based on legislative requests. 	
		Requirement to provide security documentation for any equipment or services from suppliers and third-party providers.	
	4-1-P-1-2	Related Cybersecurity tools: • Template for Cybersecurity Policy Regarding Third-Party Guidelines: • Introduce contractual obligations on suppliers and third-party providers to provide security documentation of their equipment, product or service.	

		Define security aspects to be documented (e.g. security architecture, security)
		controls in place, security technologies in use)
		Intake and review Periodically provided documentation.
		intake and review Periodicany provided documentation.
		Expected deliverables:
		 Security documentation for equipment or services from suppliers and third-
		party providers.
		 Periodical review reports and documents.
		Third party providers compliant with law and regulatory requirements relevant to
		their scope.
		Related Cybersecurity tools:
		Template for Cybersecurity Policy Regarding Third-Party
		Guidelines:
		 Identify and document Periodically (e.g. annually) laws and regulatory
	4-1-P-1-3	requirements relevant to third party providers.
		Audit third party providers or request independent audits to verify their
		compliance.
		Expected deliverables:
		Relevant laws and regulatory requirements identified for each of third-party
		providers.
		Proof of compliance with laws and regulatory requirements provided for and third party provider.
		each third-party provider.
		Risk management and security governance on third-party providers as part of
		general cybersecurity risk management and governance.
		Related Cybersecurity tools:
		Template for Cybersecurity Policy Regarding Third-Party
	4-1-P-1-4	Guidelines:
		Include third-party providers related risks (e.g. supply chain risk) into the
		cybersecurity risk management and governance processes.
		Expected deliverables:
		 Third party risks embedded into Risk Management processes.
		 Sample of risk register that includes third party identified risks.
